The architectural design of the address center Adris at Jagićevoj street 33. in Zagreb, is a combination of classic and modern. The construction of the center will begin in 2011 and will be completed in 2015. There will be a mixture of employees Adris group and Croatia insurance.

In this way, a special page is dedicated to energy efficiency and tenacity. It should be reminded that the first 'green' corporate seventy Croatian companies are working. In accordance with the highest standards, the building has received a LEED (Leadership in Energy and Environmental Design) certificate, one of the highest in the world, which takes into account both energy and technical aspects, but also the protection of buildings for the urban environment and the environment. Finally, we are promised and helped to use energy efficiently, use ecological materials and improve the quality of life for the happiness, safety and health of the population.

The unity is an energy concept that includes a variety of innovative achievements of modern technologies, with the rest, enables both economic care and reduction of waste energy and waste. Heat insulation although it is also outside the rules and common izgradnje.

At the postal center Adris is ordered and installed up to 5000 meters of 16mm Comfort Pipe Plus PEXa pipe, which is made of high density polyethylene.
The building is landscaped 800m2 Uponor Nubos stands at the foot of the grijanja as it would ensure comfortable heat without smoke. The skyscraper slab ensures a single-storey installation that is at the bottom compliant with all relevant civil norms and regulations. Cijevi stands and fixes in place with the help of Nubos Chepov and steps on his surrounded estrihom.

This method ensures accurate heat delivery as it is designed to enable precise temperature control, which leads to significant energy savings and operational costs.
