Cooling and heating ceilings in Kantyna u Konicku

Beteiligung von Uponor

- Over 210 pcs of Thermatop M panels of various sizes were used in total. The panels were connected in series using the Tichelmann principle and then connected to the Uponor Vario PLUS modular plastic manifolds with the Uponor Uni Pipe PLUS pipe 20x 2.25 mm.

Cooling and heating ceilings in Kantyna u Konicku

The modern Uponor Thermatop M heating system ensures perfect comfort in the new gastropub of Kantyna u Konicku. During the reconstruction of the original building in the center of the city of Uherské Hradiště, for the newly opened Kantýna u Koníčků gastropub, Uponor Thermatop M panels were used as a heating and cooling system. These panels were not only able to meet the demanding requirements of the architects for a modern appearance of a stylish branch, but also proved their functionality in the kitchen and technical facilities of the restaurant. In total, over 210 panels of various sizes were used. The panels were connected in series using the Tichelmann principle and then connected to the Uponor Vario PLUS modular plastic manifolds, connected under the ceiling of the rooms with Uponor Uni Pipe PLUS pipes 20x 2.25 mm.

Fakten zum Projekt

How to create a unique space?

Uponor Thermatop M is a revolutionary radiant ceiling heating and cooling system that makes architectural design stand out because the ceilings are smooth and seamless. This allows Thermatop M to create a ceiling that is not just a functional ceiling, but a work of art. Its flexibility can meet even the most demanding architectural requirements. The system is powerful, whether you need heating in winter or cooling in summer. And best of all, built-in elements can be easily integrated into the ceiling! This means you don't need radiators that take away from the space or air conditioning units that spoil the look of the room.

So if you're looking for a way to turn your space into a place people will love to come back to, the Uponor Thermatop M radiant heating and cooling system is what you're looking for. Turn ordinary ceilings into a functional system that combines high performance, aesthetics and comfort.
