Hotel Park

Hotel Park

The modernly designed 4-star Park hotel is located at the Park Resort novelty store in Porec. With the view that the pool has sports, children's animation and even a swimming pool is ideal for a residential holiday. You can hang out in a well-equipped barbecue from the resort, drink cocktails by the pool or go for a barbecue by the sea to the city of Poreča. You will find its double-bed classic rooms, superior rooms with balconies, premium and suite rooms which like the rest of the hotel ensure a pleasant climate at all times with a cozy Uponor high care.

Hotel Park

The modernly designed 4-star Park hotel is located at the Park Resort novelty store in Porec. With the view that the pool has sports, children's animation and even a swimming pool is ideal for a residential holiday. You can hang out in a well-equipped barbecue from the resort, drink cocktails by the pool or go for a barbecue by the sea to the city of Poreča. You will find its double-bed classic rooms, superior rooms with balconies, premium and suite rooms which like the rest of the hotel ensure a pleasant climate at all times with a cozy Uponor high care.

Ecoflex Thermo Single and Twin pre-insulated pipes for the distribution of heating media and Ecoflex Aqua Single for the distribution of sanitary drinking water are used for the connection of luxury objects.

Already in the planning phase the position is clear so that the border can be known only with a plastic guide, because of the crisis of the armed water. Uponor Ecoflex can be enjoyed with a remarkably small radius of advice, which enables the release of a very small knee and comfort. The installation lacks a lot of flexibility, singularity and ease.

The goal of bio investment is to make the situation economically and energy efficient. The waste board is replaced by a high-layer insulation based on PEX with Uponor predissolved and sustainable. For flexibility and manageability, the second reason is that the quality of the insulation does not change significantly over time. The insulation is lined with HDPE protective

coating which ensures mechanical protection of the structure. For excavation, Uponor pipes with a diameter of 25 to 110 mm are used, which are cut into pieces and spoiled in the face of the column.
