

South Kilburn residential site,

Project Facts:

- South Kilburn, London, United Kingdom
- Multifamily homes
- Local Heat Distribution, Multilayer Pipe Systems
- Completion: 2021

Uponor involvement

- Resolved leaking district heating network with the use of Ecoflex Thermo; 300 metres of Uponor's Ecoflex Thermo pipes were used to create the temporary connection and then a further 283 metres of piping was installed in the underground trenches where the previous pipes lay.
- The insulation and design of Ecoflex Thermo minimised heat and energy losses, making it highly efficient system which reduced energy wastage and minimised heating costs.
- Minimised disruption to the site's residents while swapping out the old pipes for the new. The results was that no residence was cut off from the heating network for any longer than 12 hours.
