Product information and application use

Fast Trak™ Edge Strips install between the load distribution layer and the vertical building parts, covering the edge joint. The Edge Strips prevent overpour from seeping under the Fast Trak panels and protect the surrounding structure from moisture damage and expansion forces.

Installation

The existing edge joint must always include Edge Strips to the height of the leveling layer and the new floor covering to be installed. When installing Edge Strips, ensure polyethylene foil is laying down on the subsurface. It is important not to remove the protruding sections of the Edge Strips until the floor covering is installed. For further information, see the Fast Trak Installation Guide.
