

COMMERCIAL
PEX PIPING SYSTEMS

INFORMATION SHEET

Why should building owners and facility managers choose Uponor PEX Piping Systems?

Uponor crosslinked polyethylene (PEX) pipe is the flexible, durable, cost-effective solution for plumbing, radiant heating/cooling, hydronic distribution piping and pre-insulated piping systems. The proven reliability and performance of an Uponor PEX system ensures longer service life and can help reduce maintenance costs when compared to copper, steel and CPVC systems.

So why should you install an Uponor PEX piping system in your building? We'll give you several reasons...

Lifetime Confidence

- Over 40 years of success in commercial and residential applications
- More than 12 billion feet of pipe and millions of ProPEX® fittings in service worldwide
- Backed by a 25-year limited warranty*

Reduced Maintenance Costs

- Flexible pipe means fewer required connections; reduces potential leak-point liability
- Extremely durable — resists corrosion, pinhole leaks and freeze damage
- ProPEX connections cannot be dry fit, eliminating dry-fit blow offs and leaks

Better System Performance

- Resists corrosion buildup for greater water flow and reduced water waste
- Uponor ProPEX fittings have a larger internal diameter compared to PEX crimp and insert fittings for greater water flow and faster hot-water delivery

Maximum System Efficiency

- Promotes faster hot-water delivery times
- Lessens hot-water volume contained in the system
- Reduces burden on municipal water supply and wastewater
