Church "House of the Architect"

House of Prayer of the Church "House of the Architect"

The Church "House of the Architect" is part of the Association of Missionary Churches of Evangelical Christians of Ukraine. It was originally planned as a local church. Construction has been going on for quite some time, about 10 years, by the efforts of parishioners.

Architect - Georgy Dukhovichny

Installation - IVIK LLC

The church building is a new construction of a room for visiting parishioners for 1200 people

The task is to heat the warm floor of the passage gallery and the audience area of the amphitheater of the prayer hall. The Uponor Classic system with a PEX-a $\varnothing 17$ pipe was used. The unusualness of the task is that the amphitheater covering will consist of wood, which will also be a place for seating.

The church premises are located in the Dniprovskiy district of Kyiv, not far from the Lisova metro station.

The architectural project was developed by the famous Ukrainian architect G. S. Duhovychny (d. in 1997–2005).

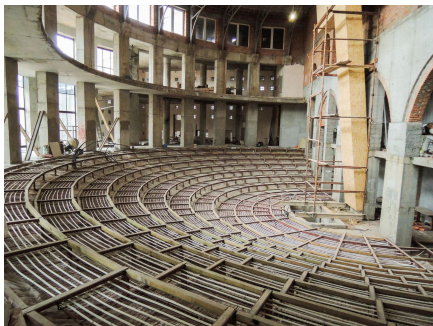

The total heated area is 5 thousand m²

The total number of $\varnothing 17$ pipes is 16 thousand m/p

The proposed technical solution was to be convenient for comparison with the solution offered by other manufacturers-suppliers. The key factors for choosing a supplier were high quality and competitive price. Uponor products were selected based on both criteria. Design and installation were performed by our partner, IVIK.
