Product systems

Address

Alcobendas

Project Type

New building

Partners

architect

Ángel de Diego Rica and Vicente

Olmedilla Ramos

Uponor's Invisible Climate is a state-of-the-art system that forms an integral part of the design of buildings and their performance. It represents a commitment to the future that guarantees the optimisation of energy consumption and maximum comfort.

It has already been applied in a wide range of constructions within the international non-residential sector. Everything from large hotels to cultural institutions, the headquarters of public bodies, modern airports, skyscrapers, etc.

And this on top of the considerable 457,182 kg per year reduction of CO2 emissions. The ECOBOX Building is an installation that brings innovation, creativity and bioclimatic commitment together under one roof.
